Description: The founder presents a project for the production of **FMN-88** ferromanganese and **FH-100A** ferrochrome, which are used in metallurgy for alloying steel. The main consumers of the products are metallurgical enterprises. The advantages of the project include the use of advanced production technologies that ensure high quality of the products and stability of their chemical composition. This allows us to meet the most stringent requirements of metallurgical enterprises, improving the properties of steel, such as strength, wear resistance and corrosion resistance. In addition, the project is aimed at optimizing production processes, which allows us to reduce the cost of products and offer competitive prices on the market.

The warehouse contains **600 tons** of manganese ore and **300 tons** of chrome ore, which are estimated at approximately **$550,000** and are the founder's investments.

Required amount of investments: $250 000

Income data for a year:

NAME	QUANTITY, TONS	PRICE, $	AMOUNT, $
Sale of ferrochrome	100	5 000	500 000
Sale of ferromanganese	300	3 000	900 000
Total			**1 400 000**

Expenses data for a year:

NAME	AMOUNT, $
Cost price of ferrochrome 100 tons (salaries, raw materials, energy costs, etc.)	322 000
Cost price of ferromanganese 300 tons (salaries, raw materials, energy costs, etc.)	600 000
Total	**922 000**

- Annual income: **$1 400 000**
- Annual expenses: **$922 000**
- Net income: $1 400 000– $922 000 = **$478 000**
- Return on investment capital:

$$\textbf{ROI} = \frac{\text{Net income}}{\text{Investment amount}} \times \text{Investor's share} \times 100\% = \textbf{134\%}$$
