Description: The founder presents an innovative project for installing solar panels for the purpose of subsequent sale of electricity to the state. This project not only supports environmentally friendly and sustainable energy production, but also contributes to a significant reduction in the carbon footprint, which is especially important in the context of global climate change.

Project advantages:

- Using solar panels allows producing energy without carbon dioxide emissions, which helps improve the environmental situation in the region.
- Development of solar energy reduces dependence on traditional energy sources such as oil and gas, which strengthens the country's energy security.
- The project contributes to the implementation of state programs to increase the share of renewable energy sources in the country's energy balance, which increases its importance and priority.

The founder takes on the lease of land, which eliminates the cost of **$6,000** per year.
