PROJECT No. 2099

Innovative MedTech platform for home skincare (Australia)

REQUIRED INVESTMENT AMOUNT

$ 5 000 000

FOUNDER INVESTMENT

$ 4 500 000

Project Description: The project represents an innovative device in the **MedTech and consumer wellness** segment, providing professional skincare in home conditions. The project addresses the problem of expensive, painful, and time-consuming procedures in clinics by offering a non-invasive alternative without side effects.

Current Status:

• Funding raised: **USD 4.5 million**

• The product is certified according to international standards**: CE, RoHS, FCC**

• Ready for commercial scaling and already available for global sales

International Recognition:

• BeautyMatter finalist (New York)

• Top-5 L'Oréal Global Beauty Innovation Runway (Slingshot Singapore)

The company possesses a portfolio of **120+ patents and trademarks.**

The device combines several technologies:

• real-time skin diagnostics with personalized recommendations

• transdermal delivery of active components through capsules (15 ml)

• integration of thermal effects, acoustic impulses, iontophoresis, and LED

The product is oriented both toward end consumers (B2C) and the professional aesthetic cosmetology market.

Global Invest

Protected investments in highly profitable projects

Project Advantages:

- Non-invasive technology — safe use without special training
- Multi-technology integration — comprehensive impact on the skin
- High efficiency and customer retention due to painlessness
- Generation of additional revenue through consumables and service model
- Strong IP base (120+ patents) as a barrier to competitors
- Affordability compared to clinical procedures

Market and Prospects:

- Global anti-aging market size: estimated at USD 107 billion by 2030
- Compound annual growth rate (CAGR): 6.8%

Key growth drivers:

- Shift toward home solutions and personalized care
- Development of the consumer health and wellness segment
- Growing demand for non-invasive technologies

Sustainable revenue growth and margin expansion are projected through scaling of the **B2C segment.**

Business valuation potential — up to **USD 300 million** in the medium term.

Team:

The project is implemented by a top management team with a combined experience of more than **100** years in **MedTech, healthcare**, and commercialization of technological products.

The team has expertise in:

- Development and implementation of medical technologies
- International commercialization
- Investment and financial flow management
- Building global partnerships

Required Investments:

The project is raising angel funding in the amount of **USD 5 million** at a business valuation of **USD 40 million**.

The funds will be allocated to:

- scaling commercialization
- development of sales and distribution
- entry into international markets
